

QGIS Application - Feature request #20034

FID field in table should not be editable

2018-10-06 06:16 AM - Patrick Dunford

Status: Open	
Priority: Normal	
Assignee:	
Category: Attribute table	
Pull Request or Patch supplied:	Resolution:
Easy fix?: No	Copied to github as #: 27856
Description	
<p>When editing a data table for a layer it is possible to accidentally overwrite the FID field causing an error when saving the layer.</p> <p>If one is very fortunate one can try to make up a FID that will fit in the field because there is no apparent way of recalling the correct value that will work with the data table (Geopackage).</p> <p>This field should be rendered incapable of being overwritten as there is no sane reason for it being possible to accidentally overwrite the field.</p>
