Category:	Authentication system			
Affected QGIS version:	3.3(master)		**Regression?:**	Yes
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	27876

Description

Not sure when this started happening, just noticed the messages today. When rendering a XYZ layer with an https connection (for e.g., https://tile.openstreetmap.org/{z}/{x}/{y}.png), QGIS' console gets flooded with the following warning messages:

    WARNING   QSqlDatabasePrivate::database: requested database does not belong to the calling thread.
    WARNING   QSqlQuery::prepare: database not open

- Regression? changed from No to Yes

- Status changed from Open to Feedback

is "authentication system" the correct category here?

#2 - 2018-10-10 09:41 AM - Alessandro Pasotti

- Assignee changed from Larry Shaffer to Alessandro Pasotti

- Status changed from Feedback to In Progress

Yes, it comes from the auth system and there is a PR: https://github.com/qgis/QGIS/pull/8149 (I wonder why this ticket was not updated accordingly).
