Description

Dear Sir / Madam

First a comment on a brilliant package.

Second I have a New Garmin that uses USB connection and the QGis only has the older COM port designation. Any idea if there will be changes and when.

Second I have registered for the community and cannot get into the site.

I have received the confirmation from Qgis but when I enter the confirmed name and password I cannot proceed

Any suggestions

Many Thanks

Kind Regards

Stuart Gray

the report is misplaced. I think the good name should refer to GPS USB port, and I think this is an useful (probably easy) improvement.

The request for a usb entry can be an enhancement for the next version of qgis...

What is the qgpbabel command line that you use to access the GPS on a USB port under windows?
