

QGIS Application - Bug report #20100

[Processing] Edit-in place "Drop geometries" algorithm from the locator bar does not show success message

2018-10-13 06:08 AM - Harrissou Santanna

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Processing/GUI	
Affected QGIS version:	3.3(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 27922
Description		
<p>I accidentally run the in-place edit "drop geometries" alg (from the locator bar) on the provided sqlite layer (without feature selected) and happens that the message bar was blocked at <i>executing algorithm drop geometries</i> 98%. The geometries seem removed however (i can't see them and trying to zoom to extent or selection fails).</p> <p>I then create a temporary layer with one feature from the sqlite layer and run the same alg, without selection: I ended up with <i>executing algorithm drop geometries</i> with no percentage or anything to help you understand that the work is (obviously, well) done. Running directly from the processing toolbox shows a success message.</p>
