

QGIS Application - Bug report #20169

Gnome: Open Gdal dialog shows silly long filter list with empty items

2018-10-19 05:48 PM - Richard Duivenvoorde

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	3.3(master)	Regression?: No
Operating System:	Debian testing	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 27990
Description		
<p>See screenshot. I see this only on my Linux machines (both on Debian and Flatpak version).</p> <p>To reproduce:</p> <ul style="list-style-type: none">- Open Data Source Manager- Click the Raster item in the right column- Click the little file chooser button (...)- Open the 'Filter' dropdown on the bottom.- With me looks like the screenie <p>Windows looks fine.</p> <p>I understand there is also the native vs qt-version of dialogs, not sure if that has something to do with it.</p> <p>Would be nice if somebody can confirm (for both Gnome and KDE).</p> <p>Running against Qt 5.11.1</p> <p>Note that I also have this currently in 2.18, so it could be a Gnome thing.</p> <p>Running against Qt 4.8.7</p>

Closing myself, as I found out this is a Gnome typical thing, to be fixed upstream.

You can test it with whatever Gnome/Gtk application with a combobox in it. When you place the combobox on the bottom of your monitor, gtk will try to create the white empty canvas first INSIDE your monitor canvas, and then paint the text on it, and then places little arrows in it to move up or down. But in our case we have so much text that th 'white canvas' itself becomes so big that those arrows will not be visible or working...
