

QGIS Application - Bug report #20225

QGIS crashes when layer rendering is aborted

2018-10-26 11:34 AM - Harrissou Santanna

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Unknown	
Affected QGIS version:	3.3(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: no timely feedback
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 28046
Description I add a layer that has a lot of features and while it was rendering I unchecked it in the layers panel. BOOM!

What layer type?

#2 - 2018-10-26 10:05 PM - Harrissou Santanna

- *Status changed from Feedback to Open*

It was a PG polygon layer.

But I'm a bit confused as I later realized that it's not the QGIS instance I added the layer to that breaks but two others (with one of another user profile) I did not touch that closed.

Please try on QGIS 3.4.1, if the issue is still valid change the affected version, thanks.
