

## QGIS Application - Bug report #20243

### losing SVG symbol elevation during DXF export

2018-10-28 02:23 AM - Kepes Ádám

<b>Status:</b>	Open	
<b>Priority:</b>	Normal	
<b>Assignee:</b>	Jürgen Fischer	
<b>Category:</b>	DXF export	
<b>Affected QGIS version:</b>	3.5(master)	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 28064
<b>Description</b>		
<p>qgis 2.18.3 loses expression-calculated sized SVG symbol's heights (fix-sized symbols are good), Qgis 3.2.3 loses !!ALL!! SVG symbol elevations. This way QGIS dxf export converts their elevation to 0, making impossible of creating well-formatted 3D surveys, plans, drafts.</p>

Qgis 3.2.3 loses !!ALL!! SVG symbol elevations.  
This way QGIS dxf export converts their elevation to 0, making impossible of creating well-formatted 3D surveys, plans, drafts.*

There is no progress since in this case. Without being able to export symbols and text with correct heights, qgis dxf export is almost useless.

Is there a way somehow to financially patronate this defect fix in order to be corrected?

I'm only an individual, who are struggling without this feature. I could only donate for it being fixed, can't make yearly thousand euro high donations. Isn't it possible to donate for small defect fixes, project-orientally?

right, the link is not for donation, is to point you to a professional that can help you solve your issue. You can still make a donation of course, but usually this funds are not targeted to solving any specific issue.

I understand, thank you. But how do i know who will be able to develop and repair this dxf function?

Could you change it to version 3.4 or 3.5 ? They are still affected too

#### #6 - 2019-02-06 07:37 PM - Jürgen Fischer

- Affected QGIS version changed from 3.2.3 to 3.5(master)
