

QGIS Application - Bug report #20274

Saving symbol in Symbol selector

2018-10-30 04:36 PM - Hadrien Bois

Status: Closed
Priority: Normal
Assignee:
Category: Symbology
Affected QGIS version: 3.4.0
Operating System: win10x64
Pull Request or Patch supplied: No
Crashes QGIS or corrupts data: Yes

Regression?: No
Easy fix?: No
Resolution: duplicate
Copied to github as #: 28095

Description

User Feedback

In the Symbol Selector window (right-click on a layer, click Styles, click Edit Symbol). Click on Save Symbol, input a name for the symbol, click Save and QGIS crashes.

Maybe it has something to my user profile?? This is a relatively clean install (uninstalled everything through OSgeo4w before re-installing qgis 3.4, as I had some issues with multiple installs). Not totally clean because my recent projects and Function Editor functions and User profiles were still there.

Report Details

Crash ID: 2bb36f476fc76b21f6139c5831209efb2835e32f
