

QGIS Application - Bug report #20331

DB Manager - error editing an SQLite query - single threads

2018-11-02 01:35 PM - Chris York

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	DB Manager	
Affected QGIS version:	3.4.0	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 28152
Description		
<p>When trying to execute queries on a Geopackage database I get the following message if I try to edit the query:</p> <div><i>SQLite objects created in a thread can only be used in that same thread. The object was created in thread id 3948 and this is thread id 13664.</i></div> <p>This means that the query has to be perfect before attempting to execute it - so no way to heuristically check the syntax. It also occurs if I execute a query first and then try to load as layer. This means that it is not possible to check the outcome of the query before adding to the canvas.</p> <p>The work around is to close the DB manager and start again, but this seems like a regression / inconvenience (retype or cut / paste required each time) although the unspecified errors that I was getting in 3.2.3 may have been this issue.</p>
