

QGIS Application - Bug report #20356

QGIS 3.4 crashes right after opening a windows explorer file picker window

2018-11-04 05:43 PM - Josh Rosenthal

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Windows Package	
Affected QGIS version:	3.4.0	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: duplicate
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 28177
Description		
User Feedback		
Crash occurs whenever qgis goes to a windows explorer file picker window. UI stays interactive for a moment, and then freezes, then you get the crash message. - eg: layout : export as pdf, layout : image item properties : select image path, map : export as image, etc. Map : Open From crashes, but doesn't show the crash reporter window. Clicking quickly to select or enter a filename before the crash doesn't work - still crashes QGIS 3.4 installed via standalone worked fine for a few days (built map, numerous exports etc), then started the crashes preventing me from exporting my map. I installed the OSGeo4W version and for a time ran that successfully, then the crashes started there too. Things I've tried: Uninstalled, revo uninstaller to clean up registry, cccleaner for the same, deleted profile from user/APPPDATA 1) Any advice of how to get qgis working properly (not crashing on export as pdf) or 2) Any way to export as pdf via a command line option that doesn't involve a file picker? Below are a few different stack traces from different crashes in case thats helpful h2. 1) Report Details from crash at Layout Export to PDF Crash ID: b698ac1db19710a8915a9eb09597fc1faeccc120

Another stack trace, this time from map: export to pdf. Also, attached is a debugview log (though there were no messages between initiating the save as interface and the crash, so this may be of limited use

#2 - 2018-11-04 08:22 PM - Nyal Dawson

- Status changed from Open to Feedback

Please test with 3.4.1

#3 - 2018-11-04 08:45 PM - Saber Razmjooei

- Assignee deleted (Jürgen Fischer)

#4 - 2018-11-04 09:48 PM - Josh Rosenthal

Same issue occurs in 3.4.1, 3.5 dev, and 3.4.0

#5 - 2018-11-04 11:00 PM - Giovanni Manghi

- Status changed from Feedback to Open

#6 - 2018-11-04 11:07 PM - Nyal Dawson

- Status changed from Open to Rejected
- Resolution set to up/downstream

This almost certainly a local issue only - see #19962 for debugging steps for a similar crash caused by other software installed on the workstation.

#7 - 2018-11-05 01:06 AM - Josh Rosenthal

Confirmed, followed the #19962 debugging steps. I used ShellExView to view and disable all non microsoft shell extensions, and then qgis worked properly. Thank you!

I had the same problem and it was solved using ShellExView. Same thing. I installed it, under Options - Hide All Microsoft Extensions. Then Control + A to check all files, right mouse button and 'DISABLE SELECTED ITEMS'.

Thank you!
