

QGIS Application - Bug report #20380

Tiny Identify Results window

2018-11-06 11:23 AM - Oskar Karlin

Status:	Open	
Priority:	Normal	
Assignee:	Denis Rouzaud	
Category:	mac_os_specific	
Affected QGIS version:	3.4.0	Regression?: No
Operating System:	macOS	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 28200
Description From version 3.4 the GUI on Mac seems to have changed a lot (it now doesn't look at all like macOS gui (but that's another story)) and one of these things that have changed is that the default size of the <i>identify feature</i> popup window is now very very tiny instead of having the size of the actual content of the attribute columns. See attached image. This was not an issue before 3.4.
