Description		
User Feedback		
<p>QGIS 3.2 or 3.4 : when doing nothing for a while (better said : doing something else on another application) it crashes (very) often - not to say 'systematically'. ... I can't point a special step before the crash.</p> <p>No such problem with 2.18.</p> <p>The project is linked with postgis data.</p>
