

QGIS Application - Bug report #2044

Field Calculator Problem

2009-10-30 01:23 PM - Marco Hugentobler

Status:	Closed	
Priority:	Low	
Assignee:	Marco Hugentobler	
Category:	Digitising	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 12104
Description		
<p>Hi all,</p> <p>I've come across a problem with the field calculator. I'm using QGIS 1.4.0.39 via OSGEO4W on an XP box. Here's the issue:</p> <p>When using field calculator to "Only Update Selected Features," all unselected features (incorrectly) get a value filled. For example, if I create a new field, and set it equal to an existing field, the selected features get updated properly. However, all other features get the value of the first selected feature.</p>		

History

As soon as I commit the changes to disk, the values seem to be normal again. Also the identify tool shows correct results. Probably an issue with the attribute table and not-committed values.

#2 - 2009-12-20 09:45 PM - Marco Hugentobler

- Resolution set to fixed

- Status changed from Open to Closed

attribute table update seems to be fixed in commit:7f067126 (SVN r12556). Thanks, jef!
