Category:		
Pull Request or Patch supplied:		Resolution: duplicate
Easy fix?:	No	Copied to github as #: 12112
Description		
<p>The print composer is quite good now. You can do very good models and map printing with it.</p> <p>One thing that could improve it much more could be to add a color choice on labels.</p> <p>For the moment, you can specify the font, the size, the style of the label but not its color (not shown in dialog). You can also provide the color of the label borders and background , but you can't colorize what is written in it...</p> <p>I guess that you have to change the code in the print dialog part and also in the management of the .qsd file format.</p>
