Pull Request or Patch supplied:	No	**Resolution:**	no timely feedback	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	28432	

Description

Hello,

I have just installed QGIS 3.4 in Windows 10 and for some reason it is not able to start. The flash screen, however, does appear and I noticed that it stopped running once it starts to load the Python module. No error/bug message popped up so I am not sure on what to attach here.

Any idea in how to solve this?

History

Update: I was able to start them by typing 'qgis' in the OSGEO4W shell, but it does not allow me to to write file from the app (possibly due to permission issues)..

- Status changed from Open to Feedback

This seems definitely like a local issue.

#3 - 2019-01-02 01:24 PM - Jürgen Fischer

- Resolution set to no timely feedback

- Status changed from Feedback to Closed
