QGIS Application - Bug report #20615
Mac OS QGis installer cannot find python 3.6

2018-11-23 10:12 PM - Vladislav Mikhailov

Status:	Feedback		
Priority:	Normal		
Assignee:	Denis Rouzaud		
Category:	mac_os_specific		
Affected QGIS version:	3.4.1	**Regression?:**	No
Operating System:	MacOS High Sierra (10.13.3)	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	28435

Description

When I try install QGis, see message about "QGIS requires Python 3.6.". But I already have python 3.6.5

QGis version: 3.4.1 (new LTR)

MacBook Pro (Retina, 13-inch, Early 2015)

2,7 GHz Intel Core i5

MacOS High Sierra (10.13.3)

Python version 3.6.5

Do you want to try this installer:

https://lutraconsulting.github.io/qgis-mac-packager/

QGIS 3.4.2 is available.

#2 - 2018-11-26 11:18 AM - Rhenriques Henriques

Saber, the recommended installer has some issues. QGIS should be named QGIS3 to allow the parallel use of the previous LTR version. Anything that we do in the general options lead the app to a crash. Beyond that, seems to be a nice effort to bring a stable working version of QGIS to MacOS with all tools available.

#3 - 2018-11-26 11:58 AM - Saber Razmjooei

Thanks for your feedback. The application is not officially a part of QGIS, so I don't want to hijack this ticket. But, there is already a ticket for your request:

https://github.com/lutraconsulting/qgis-mac-packager/issues/11

The issue has been addressed in our packages So, you should be able to have multiple versions of QGIS (LTR, PR and nightly). Testing and reporting back is highly appreciated.

Is this issue still valid?
