Affected QGIS version:	3.4.2	**Regression?:**	No	
Operating System:	Windows Vista	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	no timely feedback	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	28480	

Description

I have run successfully QGIS version 3.2.1 (Bonn) in my old laptop (Windows Vista).

Then I installed the desktop version 3.4.2 (Madeira), but it will not start.

The error message is: "Could not load qgis_app.dll".

I have compared the files (qgis.bat, o4w.env and qgis-bin.env) between both versions and cannot find any difference or reason for the failure.

I will append those files.

I apologize, that I am not any specialist in such software troubles.

May the reason be, that those versions cannot be simultaneously in my laptop?

Best Regards,

Reino
