QGIS Application - Bug report #20670
Processing raster calculator error when re-rerunning the algorithm

2018-11-29 10:05 AM - matteo ghetta

Status:	Closed			
Priority:	Normal			
Assignee:	Alessandro Pasotti			
Category:	Processing/QGIS			
Affected QGIS version:	3.4.2	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:		**Copied to github as #:**	28490	

Description

Very simple scenario. Single raster layer and an operation like ``raster > 100``. After the layer is correctly generated **don't** close the dialog and try to run it again (with the same expression or another, it doesn't matter).

The algorithm pops up this message:

``Incorrect parameter value for LAYERS``

Seems that it is not fetching the new created layer (in fact in the layer panel the new layer is not listed). Closing and opening again works nice.

Can you please check if this bug also affects other algorithms that have the same LAYERS input for multiple layers with checkbox and list?
