Crashes QGIS or corrupts data:	No		**Copied to github as #:**	28544

Description

Enable labeling on a layer

Use the "change label" tool from the label toolbar, creating a data storage auxiliary DB.

In the change label properties dialog, there are some buffer related options (size, color) that you can change.

Modify the buffer properties: nothing happens in map canvas.

However, looking into the Layer properties dialog --> Attributes form (or Auxiliary storage) tab, you have both auxiliary_storage_labeling_buffercolor and auxiliary_storage_labeling_buffersize that you can unhide and modify. no changes either.

Give a look to the layer properties --> Labels --> Buffer tab, the properties are grayed while they should be enabled with yellow widgets for some.
