QGIS Application - Feature request #20726
Remove the "hidden" widget type and set it as a widget property

Description

I don't really see the point of having a widget type named "Hidden". It has no particular property by itself and imho can be seen as a property of other widget (eg I set a field as a range widget and then I choose to show or hide it, the same as I check whether it should be editable or read-only).
And as mentioned in #20725, it hides the use of some proper widget.

I suggest to remove it from the widget type drop-down menu and add it as a checkbox under the General section, next to "Editable" and "Label on top" options.
