

QGIS Application - Bug report #20746

QGIS 3.4 is very unstable on my Windows 10 laptop

2018-12-06 08:05 PM - Peter Mast

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	3.4.2	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: duplicate
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 28566
Description		
QGIS 3.4.1 or 3.4.2 is very unstable on my Windows 10 laptop and crashes every time. For example when I try to load a raster or vector layer with the Add Layer function. I have QGIS 3.4.x stand alone installed together with the older version 2.18.2 Can that be the cause? ===== Crash report details: Crash ID: e6b54aaed30dc3e2ab0998571609b65ded384725 Stack Trace RtlFreeHeap : free : DllUnregisterServer : DllUnregisterServer : CoGetTreatAsClass : CoReleaseMarshalData : CoGetTreatAsClass : CoGetTreatAsClass : CoGetTreatAsClass : CoGetTreatAsClass : CoGetTreatAsClass : CoReleaseMarshalData : CoReleaseMarshalData : CoReleaseMarshalData : CoCreateInstance : CoCreateInstance : CoCreateInstance : SHCreateItemInKnownFolder : Ordinal61 : Ordinal61 : Ordinal61 : Ordinal61 : Ordinal61 : SHELL32_IconOverlayManagerInit : SHELL32_IconOverlayManagerInit : NeverProvidedByJunction : NeverProvidedByJunction :

History

#1 - 2018-12-07 10:43 AM - Charly Tristavirs

Same problem, with or without 2.18 on the same cputer.

I have an evolution since 3.4.2 : QGIS crashed at start and now QGIS crashes opening a project or charging a postgis layer.

Once, I could open a shapefile layer but crashed after.

#2 - 2018-12-07 12:16 PM - Saber Razmjooei

Try to start with a fresh profile and disable all 3rd party plugins.

It is an overused recommendation, but trust me it solves 99% of the problems.
