

QGIS Application - Feature request #20794  
Allow OS to open files in already-running QGIS application (Linux)

<b>Description</b>		
<p>If QGIS is running and I double-click or "xdg-open" on a QGIS-associated file on Ubuntu, I get a 2nd QGIS app.</p> <p>There should be an option (user pref, command line, etc.) to load the file in the already-running QGIS app.</p> <p>This happens to mimic the OS X enforcement of one-instance apps, but I suggest it as a user-configurable option on Linux.</p>
