does it update frequently?

- File gearth.kml added

Generally whilst fires are underway its likely to refresh every 4 - 6 hours (depending on the number of fires). Other layers within the attached file (from

which I got the URL) are updated more frequently

Does it works as expected on 2.18?

I would need to check again but my suspicion is NO.

Drag and drop of the gearth.kml doesnt work however I understand that is because of the network connections.

Today will be a good day to watch this URL - fires everywhere and changes will be made regularly
