Easy fix?:	Yes	**Copied to github as #:**	28764

Description

Current functionality:

When I place an attribute table in my layout, I can only order the rows based on columns that are visible in the table.

Desired functionality:

I should be able to order my data on any columns in the table, whether visible or not. For example (see attached image), I have a table right now where I've included numbers to dictate the order certain items appear in the table (entry_order). I don't want the column itself to show in my attribute table, but the only way I can use it for ordering is to have it visible in the table.

Seems like this is an easy fix. Unfortunately, I'm not experienced enough to tackle it on my own.
