Crashes QGIS or corrupts data:	No		**Copied to github as #:**	28775

Description

I'm using QGIS in Gnome (3.28.2) on Ubuntu (18.04). When I try and use the native color chooser dialog to edit a raster raster layer's symbology color values and I select a custom color (and use select/copy the hex code for a color), it causes QGIS to hang indefinitely and eventually crash. Perhaps Gnome isn't passing the right-click copy action on to QGIS in the color chooser dialog?

History

#1 - 2019-01-10 01:49 AM - Nyall Dawson

- Resolution set to up/downstream

- Status changed from Open to Closed

This is an upstream Qt/Gnome issue -- we can't fix in QGIS
