

## QGIS Application - Bug report #2099

The "delete part" and "delete ring" tools work with a sensibility that is taken from the "search radius for vertex edits" configuration. Feature or bug?

<b>Description</b>		
<p>We have noticed that under windows (xp, vista, seven) and linux (ubuntu 9.10) the tool just works if ones clicks on a node of the part to be deleted. Clicking inside of the part doesn't produce any effect. Using trunk, rev. 12096.</p> <p>We are developing a project with simple polygon layers in a projected CRS (20790 and 20791), project crs 20790, ofr on, a raster loaded (in the 20790 crs).</p>

Well, at the end I found that the "delete part" tool (and I suppose also the "delete ring" tool) do works with the same configuration for "search radius for vertex edits". Is this on purpose?

#### New description:

The "delete part" and "delete ring" tools work with a sensibility that is taken from the "search radius for vertex edits" configuration.

If someone can confirm that this is on purpose than we can close this ticket.

- Resolution set to invalid

- Status changed from Open to Closed

I think it makes sense to use the vertex edit tolerance, because with those tools, you select a vertex of the part / ring

+1 for me, but is this documented?

#5 - 2010-01-09 03:12 AM - Otto Dassau

I added a note to the documentation in trunk. thanks!
