Description

Hi

I am using QGIS version 2.18.20 & i want to insert mile stone location along road center line with given interval (Length every 500 Mtr)& known offset value. Inputs are Road center line (Shape File) & mile stone detail in excel format (excel format contain road name, Cumulative length , offset detail, alignment(Left/Right)there is no location detail (X,Y coordinate)in excel copy. is there any plugin or function in QGIS to create mile stone points referencing line object by using excel data.

If any one have any solution please suggest

Thanx
Krishna Paul
