

QGIS Application - Bug report #21079

Problems to show elevation data from TIFF file

2019-01-23 12:19 PM - Adrian Quigley

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Rasters	
Affected QGIS version:	3.4.3	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: no timely feedback
Crashes QGIS or corrupts data:	No	Copied to github as #: 28897
Description		
Hello		
I work many times with QGIS and CIVIL3D, and when I create a surface from Civil 3D and export it as a TIF file in order to open it in QGIS 3.4, the elevation data from this tif file appears "flat" (i.e. the same elevation throughout the area). However, strangely enough, when I extract contours, these are correct. I do not know how to fix this problem. I attached a snapshot.		
Thanks everyone :)

- Status changed from Open to Feedback

Can you attach a sample of the raster?

#2 - 2019-02-24 01:07 AM - Giovanni Manghi

- Resolution set to no timely feedback
- Status changed from Feedback to Closed
