QGIS Application - Bug report #21193
Double GeoJSON item in Protocol dropdown?

2019-02-06 11:50 PM - Richard Duivenvoorde

Crashes QGIS or corrupts data:	No		**Copied to github as #:**	29011

Description

When you open a Vector layer in the Data Source Manager, select 'Protocol' there is a dropdown 'Type' which in my case shows GeoJSON twice (see screenshot). Both work for me, but wondering why this is.

Are/should they (be) different, then it would be better to make them distinguishable from each other?

Is one of them redundant? Then better to remove one?
