Description

I would like to see a way to label multiple values.

Here is my proposal:

If there is a list view that contains the list of attributes and a text edit box that contains a layout of the label, a user can double click on one of the attribute and that attribute name (e.g. quad_name) would show up in the layout text edit box in brackets (e.g. [quad_name]). Other attributes can be added by repeating the above steps and new lines can be added by entering CTRL-Enter. It would be great if html can be used in the layout text edit box!
