### Description

Hello,

I am using QGIS Desktop v3.0.1

When I select the checkbox for any installed plugin in the list of plugins, the application gets hanged.

After some seconds the application starts showing "(not responding)" notification in  title bar of the plugin window.

In case I try to close the plugin window, the applications crashed completely and has to be terminated.

I have waited for long intervals of time on multiple occasions before reporting this issue.

Please let me know if further details are needed from my side.

PS - I have selected 3.4 as affected version as v3.0.1 was not available in the list.

Best,

Akhil

## History

**#1 - 2019-02-24 11:18 AM - Giovanni Manghi**

*- Resolution set to invalid*

*- Status changed from Open to Closed*

3.0.1 is completely obsolete.

You must try 3.4.4 with a clean state (new qgis profile with no 3rd party plugins installed). If problem continue then reopen.
