Category:	Attribute table			
Affected QGIS version:	3.4.5	**Regression?:**	No	
Operating System:	windows 7, ubuntu 18.04	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	duplicate	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	29182	

Description

Ive tested this in the 3.4 LTR in on Windows 7 and Ubuntu Bionic.

If I have a relation set up between 2 layers and the child layer has an attribute with the widget set to "attachment" with web view preview then when I try to switch between child features in the relation widget in the attribute form QGIS will crash.

I've attached sample data/project. to replicate:
 identify a point.
 scroll down the attribute table to the relation widget
 click on a new child feature
