

QGIS Application - Bug report #21389

Qgis application crash

2019-02-26 10:38 AM - Daniele Gambetti

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Attribute table	
Affected QGIS version:	3.4.4	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch submitted:		Resolution: no timely feedback
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 29206

Description

User Feedback

I work with consistent punctual shape files, usually with 10.000/20.000 records and a lot of information.

Every time in editing mode i select some points and then I try to deselect some of this points through the attribute table (ctrl + click), Qgis application crash.

to prevent the situation from happening, I have to save the editing and deselect the points outside the editing mode

I also noticed that this version of qgis if you work on a consistent amount of data, tends to crash often, simply opening the attribute table after closing it, or through simple actions

QGIS Info

QGIS Version: 3.4.4-Madeira
QGIS code revision: commit:f6ddc62fdb
Compiled against Qt: 5.11.2
Running against Qt: 5.11.2
Compiled against GDAL: 2.4.0
Running against GDAL: 2.4.0

System Info

CPU Type: x86_64
Kernel Type: winnt
Kernel Version: 10.0.17763

History

#1 - 2019-03-01 07:55 PM - Giovanni Manghi

- *Crashes QGIS or corrupts data changed from No to Yes*
- *Status changed from Open to Feedback*

Please try with a new/clean profile (no 3rd party plugins installed). If the problem persist please attach a sample project with data.

#2 - 2019-03-17 09:26 AM - Giovanni Manghi

- *Resolution set to no timely feedback*
- *Status changed from Feedback to Closed*

Closing for lack of feedback. Please reopen if necessary.
