

QGIS Application - Bug report #2139

NG Symbology not respecting saved properties for postgis layers

2009-11-22 08:12 PM - John Tull

Status:	Closed	
Priority:	Low	
Assignee:	Martin Dobias	
Category:	Build/Install	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 12199
Description		
For postgis layers that have a default style, these style properties are not being loaded when ng-symbology is enabled and the layer is added to the canvas.

I'm unable to reproduce... Having a layer in [[PostGIS]] with a default style I'm getting the style when the layer is loaded.

Please check the ~/.qgis/qgis.qmldb sqlite3 database - is the style saved there correctly?

My guess is that this is another qt-4.6 issue. I will try to do some further testing and report back on it this week. Meanwhile, consider it a non-issue until someone else can corroborate the problem.

#3 - 2009-11-23 11:56 AM - John Tull

- Resolution set to invalid
- Status changed from Open to Closed

I removed the qgis.qmldb and was able to get things working again. Closed as another invalid bug report. I'm on a roll.
