

QGIS Application - Bug report #21627

WMS infotool does not show doubles and/or numbers?

2019-03-20 03:06 PM - Richard Duivenvoorde

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Web Services clients/WMS	
Affected QGIS version:	3.7(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 29443
Description		
Anybody can confirm: Having a (geoserver) WMS showing points, then using the i-tool, the Identify-Tool panel does NOT show the fields that are (in the gml) doubles/reals. Integers and text are show, but those fields are empty! To check: Use wms: https://geodata.nationaalgeoregister.nl/bevolkingskernen2008/ows?SERVICE=WMS&X%26Y%26INFO_FORMAT=application/json epsg:28992 layer: bevolkingskernen2008:bevolkingskernen2008_cbsbevolkingskernen2008 Activate Klik on a polygon, and look in the 'Identify Results' Panel. With me if I use Format: Text it looks like: gnome-shell-screenshot-J7M9YZ.png while if I use Format: Feature gnome-shell-screenshot-OCi9YZ.png What is asked is: https://geodata.nationaalgeoregister.nl/bevolkingskernen2008/ows?SERVICE=WMS&VERSION=1.3.0&REQUEST=GetFeatureInfo&BBOX=94754.28008294067694806,472474.20718678156845272,128178.85744312187307514,492398.68952814734075218&CRS=EPSG:28992&WIDTH=1129&HEIGHT=673&LAYERS=cbsbevolkingskernen2008&STYLES=bevolkingskernen2008:bevolkingskernen2008_cbsbevolkingskernen2008&FORMAT=image/png&QUERY_LAYERS=cbsbevolkingskernen2008&INFO_FORMAT=application/json&I=590&J=421 Uh.... &INFO_FORMAT=application/json ?? Anyway, confirmed with me both on Windows and Linux on 3.4 and 3.7

I see the same, if this worked as expected on 2.* we can tag this as a regression, cheers!
