Crashes QGIS or corrupts data:			**Copied to github as #:**	12228

Description

Highlight a feature using the identify tool (if is not the first feature to be identified you'll need to click somewhere on the identify results pop up window), then activate the "select features" tool, the feature is immediately un-highlighted.

I really don't know if is a feature or a bug, but from my user point of view the highlighted feature should remain so, after all I may have the need to select the exact feature that I just highlighted using the identify tool...

History

#1 - 2009-12-08 10:11 AM - Giovanni Manghi

- Resolution set to fixed

- Status changed from Open to Closed

seem to have been already fixed.
