

QGIS Application - Bug report #2174

Crashes when switching field column with "New Symbology"

2009-12-01 06:57 PM - springmeyer -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Symbology	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 12234
Description 1) load shapefile (I used testdata 'polys.shp' 2) Layer Properties, choose "Catagories" 3) Hit "Classify", then "Apply", works so far... 4) Keep Properties open 5) Change the 'Column' from 'Name' to 'Value' 6) hit "Classify"... crash

- Resolution set to worksforme

- Status changed from Open to Closed

There is no such shape in the qgis sample dataset, but I found one in the qgis-mapper svn that seems the one that was used.

I cannot reproduce the problem on both linux and windows using the latest svn code (commit:f2c0df21 (SVN r12308)) on both platforms.

Give it a try again, and then if the problem persist please attach the actual shape is giving you problems. Will reopen if necessary.
