

QGIS Application - Bug report #2176

OGR converter: CSV export is broken

2009-12-02 06:02 AM - Markus Neteler

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	C++ Plugins	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: wontfix
Crashes QGIS or corrupts data:		Copied to github as #: 12236
Description		
<p>In trunk, the conversion of a SHAPE file (points) to CSV fails. It creates an empty ASCII file.</p> <p>Additionally, the button description is felt to be confusing: "Dataset" does not indicate that a directory is meant.</p> <p>Second bug: if the "Dataset" directory already exists, the converter fails with "Failed to create...". In the shell terminal a message is seen that it already exists: it would be important to catch this directory-present error and ask the user to suggest a different name.</p> <p>"Layer" as button description is also unclear (for CSV): indeed a file name is meant.</p> <p>See also attachment.</p>

Does keeping a partially broken (and presumably unmaintained) ogr plugin makes sense, now that the same functionality is available through the "Save as..." menu? The only advantage I see is that the plugin does not require opening a layer to convert it, but it is a minor inconvenience if compared to the bugs we have.

#3 - 2011-03-04 09:52 AM - Paolo Cavallini

- Resolution set to wontfix

- Status changed from Open to Closed

Plugin removed as per commit:f557e5d6 (SVN r15332)
