

QGIS Application - Feature request #21778

Activate as predefined, the "preview" tab in the properties of the vector layers

Easy fix?:	No	Copied to github as #: 29593

Description

When I activate the properties of the vector layers, in the resource navigator panel, 3 tabs appear:
Metadata, preview, attributes table.
However, as the vector file changes, the tab always returns to the first "METADATA".
I realized that if I have to do a quick search for layers, in the tab
"preview", I always have to click on it every time. It would be much more
easy to stay on "Preview".
Thank you!
