

QGIS Application - Feature request #21941

ScaleBar text needs to be able to be changed/modified for rounding/precision changes

2019-04-26 05:08 PM - Brett Carlock

Status:	Open	Resolution: Copied to github as #: 29756
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>The ScaleBar object should have the ability for the precision/rounding preferences to be set, instead of using N-number of decimals with no control.</p> <p>Not only does this make the ScaleBar look messy and unprofessional, it implies a level of precision that likely is not met with the data and how the map has been prepared.</p> <p>There should be a user-facing option to change the precision/rounding to whatever number of digits/places desired.</p> <p>I've attached a screenshot of what this ScaleBar text looks like on my layout when using miles as the unit.</p>
