

QGIS Application - Bug report #22053

Filter on WFS only filters on title field

2019-05-13 12:56 AM - Jonathan Moules

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Web Services clients/WFS	
Affected QGIS version:	3.4.3	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 29867
Description		
<p>I leave it open whether this is a bug or a feature request. It's definitely sub-optimal in its current state.</p> <p>1) Connect to a WFS. I.e. http://ogc.geo-ide.developpement-durable.gouv.fr/wxs?map=%2Fopt%2Fdata%2Fcarto%2Fgeoide-catalogue%2F1.4%2Forg_38102%2F3f11f0-91c9-479a-b748-ed1098603e91.internet.map&#38;version=2.0.2</p> <p>2) In the filter field, type something that's only in the "name" field. For example the number "2".</p> <p>You will see no results despite this being in the layer name. It seems the filter only searches layer titles, which is a problem because not all layers have titles (Name is the only mandatory field).</p> <p>Solutions:</p> <p>Simple: Search all fields</p> <p>Complex: Have checkboxes (all checked by default) allowing the user to specify which fields to search.</p>

This bug also applies to ArcGIS Map Server filtering. It's WORSE for ArcGIS, because of <https://issues.qgis.org/issues/22055>
I suspect it applies to GeoNode and ArcGIS Feature Server too as they have the same filter by the looks of it.
