QGIS Application - Bug report #22079
Weekly snapshot issue

2019-05-14 10:43 PM - Jerry Brand

Status:	Feedback		
Priority:	Normal		
Assignee:	Jürgen Fischer		
Category:	Windows Package		
Affected QGIS version:	3.7(master)	**Regression?:**	No
Operating System:	Windows Professional 64bit	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	29892

Description

This has been an issue for the last number of weekly releases. I can go back to the first 2 weekly snapshots of the 3.7 version and install those but not since without the error message. I got around it by saving the environment file in my temp directory and just copying it into the bin folder. The environment file has been missing in the last few weekly snapshots. The problem started with the 3.7.0-12 or 3.7.0-13 versions where the environment file changed name for some reason. The next release of the weekly snapshot reverted to the previous name but the actual file has not been included with the installation file.

```
--------------------------
Error loading QGIS
--------------------------
Oops, looks like an error loading QGIS

 Details:

 Could not load qgis_app.dll
 Windows Error: The specified module could not be found.

 Help:

 Check C:\Program Files\QGIS 3.7\bin\qgis-dev-bin-g.env for correct environment paths
--------------------------
OK

- Status changed from Open to Feedback

- Description updated

The file was never included - it's generated on install.

#2 - 2019-05-17 08:50 PM - Jerry Brand

Then it is not generating the file. It does not matter the computer I try installing to. This is only an issue I see when using the standalone "snapshot" installer.
