Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>The current way of creating and editing forms in QGIS is not ideal. It has all the great tools/features to built the forms but it can be improved to be a but more user-friendly. Here are some of the areas to improve it:</p> <ul style="list-style-type: none">- Having a preview in the form designer- Re-designing the current layout: it is confusing and all options are displayed. Some can be hidden away under advanced options.- Logic based forms: allow attribute to be visible/editable based on the logic from other attributes- Allow simple form design in Form view (when browsing data).
