<b>Description</b>		
Hello -		
In GRASS module v.to.rast, the combobox "Name of column use as raster category labels" only proposes numeric fields.		
However, for this field we would typically select a string type field		
Thanks in advance,		
Daan		

#### History

##### #1 - 2019-05-21 10:59 AM - Giovanni Manghi

- Easy fix? changed from Yes to No
- Operating System deleted (Windows 10)
- Status changed from Open to Feedback
- Category changed from GRASS to Processing/GRASS

Unless I'm missing something I think that the parameter does not make any sense in the context of Processing/GRASS:

in Processing data is imported into a temporary mapset/location as a GRASS vector/raster, processed (in this case imported and given labels to pixels) but then is immediately exported to simple-feature or a non GRASS rasters... so labels are anyway lost.
