

QGIS Application - Bug report #22120

Field_name in actions

2019-05-22 09:16 AM - Alessandro Perego

Status:	Open	
Priority:	Low	
Assignee:		
Category:	Actions	
Affected QGIS version:	3.4.8	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 29933
Description		
(tested on QGIS 3.4.8 on Windows 10) Actions in field scope have three variables: field_index, field_name, field_value. Field_name doesn't work when actions run from attribute table. For example the following python action (in field scope): <pre>from qgis.PyQt import QtWidgets expr = "[% @field_name]" + ' = ' + "[% @field_value]" QtWidgets.QMessageBox.information(None, "[% @field_name %]", expr)</pre> works good from Identify Result panel, but when the action run from the attribute table it doesn't show the name of the field. A workaround is using the field index: <pre>layer = QgsProject.instance().mapLayer("[% @layer_id]") field_name = layer.fields().field("[% @field_index %"]).name()</pre>
