QGIS Application - Bug report #2261
digitizing when a project is saved with new symbology results in a crash

2009-12-11 12:04 AM - Paolo Cavallini

Status:	Closed		
Priority:	Low		
Assignee:	nobody -		
Category:	Digitising		
Affected QGIS version:		**Regression?:**	No
Operating System:	All	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed
Crashes QGIS or corrupts data:		**Copied to github as #:**	12321

Description

When working with a saved project (see attached) using new, advanced symbology, QGIS consistently crashes at the first click on the canvas during editing operations.

History

#1 - 2009-12-11 01:14 AM - Giovanni Manghi

confirmed also under linux. It may be a issue related with this particular project file/symbology, as with others doesn't happens.

#2 - 2009-12-19 02:48 AM - Martin Dobias

I'm unable to replicate. Could you please attach also the data which leads to crashes?

#3 - 2009-12-19 03:01 AM - Paolo Cavallini

Unfortunately not: the project was done by one of my students during a course, on a sample db. If this proves a local problem, we can close it; I posted it just in case it helps discover some underlying problem

#4 - 2009-12-19 03:52 AM - Giovanni Manghi

easily replicable for me under linux: open the attached project (it will warn that there is missing data), add polygon, toogle editing, try add a new polygon ->

qgis crashes.

#5 - 2009-12-19 04:19 AM - Martin Dobias

- Resolution set to fixed

- Status changed from Open to Closed

The crash was actually caused by snapping to a non-existing layer. Nevermind, fixed in commit:6f23f9e8 (SVN r12516).
