Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:		**Copied to github as #:**	12350	

Description

Hi

My personal antivirus softwar (Avira Antivir Personal) detected a trojan in Quantum Gis files.

"In the file 'C:\\Program Files\\Quantum GIS\\grass\\bin\\g.version.exe'
a virus or unwanted program 'TR/Dropper.Gen' [trojan] was detected.
Action performed: Deny access "

According to you, Could it be a fasle positif or there is really a danger?

- Resolution set to invalid

- Status changed from Open to Closed

It's a known false positive.
