Crashes QGIS or corrupts data:		**Copied to github as #:**	10289

Description

Oeen a single [[PostGIS]] layer. Initially the zoom to layer extent within the layer properties menu does the same as zoom to full extent button on the tool bar. As it should.

Edit the SQL to generate a changed subset of features plotted by the table, this changing the extent. The zoom to layer extent option picks up the change and correctly zooms to the new extent. However the zoom to all button still just zooms to the old extent.

My change resulted in the layer comprising initially 1, then 2 features. So after the layer conained th eextra feature, the zoom to all just zooms to the extent of the first feature, but zoom to layer correctly zooms to show both features.

Using Qgis v0.8.0

History

#1 - 2006-08-10 03:00 AM - Gavin Macaulay -

- Resolution set to fixed

- Status changed from Open to Closed

Fixed in SVN commit:6e48f228 (SVN r5680).

#2 - 2009-08-22 12:46 AM - Anonymous

Milestone Version 0.8 deleted
