QGIS Application - Bug report #2309
vrt nodata is ignored when setting min/max value by current extent

2009-12-21 05:18 PM - cgsbob -

Status:	Closed			
Priority:	Low			
Assignee:	nobody -			
Category:	Rasters			
Affected QGIS version:		**Regression?:**	No	
Operating System:	Debian	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed	
Crashes QGIS or corrupts data:		**Copied to github as #:**	12369	

Description

To reproduce this bug, follow the following steps:

1) Extract and load the vrt file that is attached to this ticket

2) probe raster to see where the nulls are located.

3) zoom into a region that has some nulls.

4) In Raster Layer Properties>>Symbology, click on Current extent and then the Load button. The vrt nodata value (-999) shows up in Min.

If you zoom into an area where there are no nulls, you get a correct min/max value.

History

#1 - 2009-12-21 08:15 PM - ersts -

- Resolution set to fixed

- Status changed from Open to Closed

fixed in revision 12570
