QGIS Application - Bug report #2317
Identify tool breaks work flow when no feature selected

2009-12-23 04:30 AM - barryrowlingson -

Status:	Closed			
Priority:	Low			
Assignee:	nobody -			
Category:	GUI			
Affected QGIS version:			**Regression?:**	No
Operating System:	Unix		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	fixed
Crashes QGIS or corrupts data:			**Copied to github as #:**	12377

Description

If you use the identify tool and miss a feature, the "identify results" window disappears and a modal dialog 'no features at this position found' pops up. The user then has to go click the 'ok' on that before doing anything else.

[It's even more of an annoyance because the OK dialog always appears top-left of my screen - I suspect its not parented properly. There's a few dialogs do this]

Wouldn't it be better for the "identify results" window itself to show a message "No features found at this position". One less modal dialog is a good thing...
